

Flower petal scrub perfusion index observations

Left index finger was used:

- Hands were washed before each session of recording

Before scrubbing

8:32pm - 2.9 49 99

8:52pm - 2.0 49 99

9:12pm - 5.8 48 98

9:32pm to 10:32pm settle the wash

- went to the bathroom, washed hands
- Used the scrub with my hands and throughout my fingers 1 minute before each of the three recording session

10:32pm - 3.5 50 98

10:52pm - 5.6 45 98

11:12pm - 2.2 48 99

About 15 to 20 petals of degraded and wilted quality (cut to 1/8th of an inch)

About 1 tablespoon of Dead Sea salt

About 1/2 to 3/4 cups of water

Mixture is to be settled for 2 hours

No stirring after initial mixing

- Oils seems visible immediately after the addition of the salt to the mixture
- The mixture seemed soft while viscosity seemed to increase
- The color of the flowers deepened after the cutting process
- The cuts of flower seemed to be separated easily with the salt present
- Oils of the mixture seemed to be small in grouping and strong is surface tension

06/11/2024 - trial 2

1 hour baseline & 1 hour scrub monitoring

After washing with soap and water:

11:05pm - 10.5 53 97

11:25pm - 4.7 46 97

11:45pm - 6.5 50 96

After scrubbing:

12:05am - 5.8 56 98

12:25am - 5.0 46 97

12:45am - 2.0 46 98

Session analysis

First trial-

There seems to be a higher average of PI with flower oil trials in this trial (3.56, 3.76). A higher average heart rate in the non flower oil trials (48.67, 47.67). A higher average oxygen saturation in the flower oil trials (98.67, 98.33)

Standard deviations:

Before flower oil wash:

PI: 1.9857

HR: 2.9804

SpO2: 0.5774

After flower oil wash:

PI: 1.7156

HR: 2.5274

SpO2: 1.1459

Second trial -

There seems to be a higher average of PI with non flower oil wash trials in this trial (7.23, 4.26). A higher average heart rate in the non flower oil trials (49.67, 49.33). A higher average oxygen saturation in the flower oil trials (96.67, 97.67)

Standard deviations:

Before flower oil wash:

PI: 2.9686

HR: 3.5119

SpO2:

After flower oil wash:

PI:

HR:

SpO2:

*values rounded to the nearest hundredth

*Analysis of the two sessions done on 06/12/2024 immediately after experiment
